

Respirator Training and Fit Testing

In April 2009, Federal OSHA adopted newly revised respiratory protection guidelines in the form of Assigned Protection Factors. These guidelines provide employers with vital information for selecting respirators for workers exposed to airborne contaminants. Your affected employees require training, medical examinations, and respirator fit testing before using a respirator in their work. **Did you know that under these new guidelines, a paper “nuisance dust” mask is considered a respirator?**

SafetyTech Consultants can provide your company with the required training and fit testing for your employees at your facility! Contact us for information and scheduling dates to keep your employees safe and to keep your company in compliance with the new guidelines!
